## SHANG-HAI SHIPYARD SHANG-HAI DOCKYARDS (INTERNATIONAL DOCK), SHANG-HAI, CHINA

### INTRODUCTION

This report is one of a series describing Chinese Communist shipyards and ports as observed on aerial photography.

The Shang-hai Shipyard Shang-hai Dockyards [REDACTED] is located in Shang-hai on the southeast bank of the Huang-pu Chiang (River) at 31-15-00N 121-33-10E (Figure 1). Alternate names for the shipyard include International Dockyard, International Dock Shipyard, and Shang-hai Shipyard (East).

### DESCRIPTION

Shipyard facilities consist of 6 building ways, a transverse launching system, a graving

dock, fitting-out wharves, and approximately 65 buildings. Handling equipment consists of 1 portal jib crane and a mobile crane. The building ways appear to be for the construction of minor surface combatants, coasters, and river craft. Facilities and vessels observed at the shipyard are given in Figure 2 and Table 1, respectively. Item numbers are keyed to Figure 2.

The shipbuilding and repair facilities of the yard include a shipbuilding area, a graving dock, and fitting-out wharves. The shipbuilding area is at the downstream end of the yard and is separately secured. It consists of 6 building ways, a transverser, side launching ways and

a launching basin. Building ways 1B through 1F are 440 feet long and building way 1A is 230 feet long. The launching ways have an overall width of 175 feet and the launching cradle is 170 by 10 feet. The graving dock, upstream from the launching basin, is 555 by 120 feet

at the top and 510 by 55 feet at its floor. Most of the fitting-out wharves are upstream from the graving dock; the major section consists of an offshore wharf and 4 pontoon wharves which have an overall length of 1,125 feet. A portal jib crane serves approximately 340

feet of the offshore wharf. Three pontoon wharves at the downstream end of the yard provide an additional 350 feet of wharfage.

The shipyard contains approximately 65 buildings. These include a probable prefabrication building, a machine shop, a probable machine shop, a possible forge, an administration building, shops, and storage buildings. The industrial buildings are located in the center of the yard near the graving dock. Storage buildings and yards are located at both ends of the yard.

Security measures include a perimeter

wall and a fence between the wharves and the yard. An unoccupied AA site is within the walls. The shipyard is not accessible by rail.

The only significant changes observed between [REDACTED] are the expansion of the probable prefabrication building, the construction of a possible shop, and the construction or expansion of approximately 10 storage buildings. Construction appears to be continuing at the downstream end of the yard adjoining the building ways.
